

Objective: Develop a simple platform where shop owners can upload items for rent with per day or hourly rates, and users can view those items, rent them, and see their rented items and rental period. Shop owners can view their rented items and the return dates of those items, as well as their inventory.

Requirements:

1. The platform should have a login/registration screen that allows users and shop owners to create an account or log in using their email or social media credentials.
2. Shop owners should be able to upload items for rent with the item name, description, category, images, rental rates (per day or hour), and availability schedule.
3. Users should be able to search for items by category, location, availability, and rental rates. The items should be displayed in a grid view with the item name, image, rental rate, and availability status.
4. Users should be able to select an item and see its details, including the item name, description, images, rental rates, availability schedule, and rental policy.
5. Users should be able to rent an item by selecting the rental period, providing their payment details, and confirming their rental.
6. Users should be able to view their rented items and see the rental period, return date, and payment status. They should also be able to cancel their rental and get a refund if they cancel within a certain period.
7. Shop owners should be able to view their inventory, rented items, and return dates. They should also be able to mark items as rented, return items, and cancel rentals if needed.
8. Shop owners should be able to view their rental income and generate reports for their rental transactions.
9. The platform should have a settings screen that allows users and shop owners to update their profile, change their password, and log out.
10. The platform should be user-friendly, visually appealing, and easy to navigate.
